Namespace Documentation

4.1 geom Namespace Reference

[line.hh](#) [Line](#) class implementation

Classes

- class [Line](#)
[Line](#) class implementation.
- class [Plane](#)
[Plane](#) class realization.
- class [Triangle](#)
- class [Vector](#)
[Vector](#) class realization.

Typedefs

- using [VectorD](#) = [Vector](#)< double >
- using [VectorF](#) = [Vector](#)< float >

Functions

- template<std::floating_point T>
std::ostream & [operator<<](#) (std::ostream &ost, const [Line](#)< T > &line)
[Line](#) print operator.
- template<std::floating_point T>
bool [operator==](#) (const [Line](#)< T > &lhs, const [Line](#)< T > &rhs)
[Line](#) equality operator.
- template<std::floating_point T>
bool [operator==](#) (const [Plane](#)< T > &lhs, const [Plane](#)< T > &rhs)
[Plane](#) equality operator.
- template<std::floating_point T>
std::ostream & [operator<<](#) (std::ostream &ost, const [Plane](#)< T > &pl)
[Plane](#) print operator.

- `template<std::floating_point T>`
`std::ostream & operator<< (std::ostream &ost, const Triangle< T > &tr)`
- `template<std::floating_point T>`
`Vector< T > operator+ (const Vector< T > &lhs, const Vector< T > &rhs)`
Overloaded + operator.
- `template<std::floating_point T>`
`Vector< T > operator- (const Vector< T > &lhs, const Vector< T > &rhs)`
Overloaded - operator.
- `template<Number nT, std::floating_point T>`
`Vector< T > operator* (const nT &val, const Vector< T > &rhs)`
Overloaded multiple by value operator.
- `template<Number nT, std::floating_point T>`
`Vector< T > operator* (const Vector< T > &lhs, const nT &val)`
Overloaded multiple by value operator.
- `template<Number nT, std::floating_point T>`
`Vector< T > operator/ (const Vector< T > &lhs, const nT &val)`
Overloaded divide by value operator.
- `template<std::floating_point T>`
`T operator& (const Vector< T > &lhs, const Vector< T > &rhs)`
Dot product operator.
- `template<std::floating_point T>`
`Vector< T > operator% (const Vector< T > &lhs, const Vector< T > &rhs)`
Cross product operator.
- `template<std::floating_point T>`
`bool operator== (const Vector< T > &lhs, const Vector< T > &rhs)`
Vector equality operator.
- `template<std::floating_point T>`
`bool operator!= (const Vector< T > &lhs, const Vector< T > &rhs)`
Vector inequality operator.
- `template<std::floating_point T>`
`std::ostream & operator<< (std::ostream &ost, const Vector< T > &vec)`
Vector print operator.

Variables

- `template<class T >`
`concept Number = std::is_floating_point_v<T> || std::is_integral_v<T>`
Useful concept which represents floating point and integral types.

4.1.1 Detailed Description

[line.hh](#) [Line](#) class implementation

[Plane](#) class implementation.

4.1.2 Typedef Documentation

4.1.2.1 VectorD

```
using geom::VectorD = typedef Vector<double>
```

Definition at line 393 of file [vector.hh](#).

4.1.2.2 VectorF

```
using geom::VectorF = typedef Vector<float>
```

Definition at line 394 of file [vector.hh](#).

4.1.3 Function Documentation

4.1.3.1 operator<<() [1/4]

```
template<std::floating_point T>
std::ostream& geom::operator<< (
    std::ostream & ost,
    const Line< T > & line )
```

[Line](#) print operator.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Parameters

<i>in, out</i>	<i>ost</i>	output stream
<i>in</i>	<i>line</i>	Line to print

Returns

std::ostream& modified ostream instance

Definition at line 89 of file [line.hh](#).

References [geom::Line< T >::dir\(\)](#), and [geom::Line< T >::org\(\)](#).

4.1.3.2 operator==() [1/3]

```
template<std::floating_point T>
bool geom::operator==(
    const Line< T > & lhs,
    const Line< T > & rhs )
```

Line equality operator.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Parameters

in	<i>lhs</i>	1st line
in	<i>rhs</i>	2nd line

Returns

true if lines are equal
false if lines are not equal

Definition at line 105 of file [line.hh](#).

References [geom::Line< T >::isEqual\(\)](#).

4.1.3.3 operator==() [2/3]

```
template<std::floating_point T>
bool geom::operator==(
    const Plane< T > & lhs,
    const Plane< T > & rhs )
```

Plane equality operator.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Parameters

in	<i>lhs</i>	1st plane
in	<i>rhs</i>	2nd plane

Returns

true if planes are equal
false if planes are not equal

Definition at line 138 of file [plane.hh](#).

References [geom::Plane< T >::isEqual\(\)](#).

4.1.3.4 operator<<() [2/4]

```
template<std::floating_point T>
std::ostream& geom::operator<< (
    std::ostream & ost,
    const Plane< T > & pl )
```

[Plane](#) print operator.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Parameters

<i>in, out</i>	<i>ost</i>	output stream
<i>in</i>	<i>pl</i>	plane to print

Returns

std::ostream& modified ostream instance

Definition at line 152 of file [plane.hh](#).

References [geom::Plane< T >::dist\(\)](#), and [geom::Plane< T >::norm\(\)](#).

4.1.3.5 operator<<() [3/4]

```
template<std::floating_point T>
std::ostream& geom::operator<< (
    std::ostream & ost,
    const Triangle< T > & tr )
```

Definition at line 24 of file [triangle.hh](#).

4.1.3.6 operator+()

```
template<std::floating_point T>
Vector<T> geom::operator+ (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

Overloaded + operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

Vector<T> sum of two vectors

Definition at line 246 of file [vector.hh](#).

4.1.3.7 operator-()

```
template<std::floating_point T>
Vector<T> geom::operator- (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

Overloaded - operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

Vector<T> res of two vectors

Definition at line 262 of file [vector.hh](#).

4.1.3.8 operator*() [1/2]

```
template<Number nT, std::floating_point T>
Vector<T> geom::operator* (
    const nT & val,
    const Vector< T > & rhs )
```

Overloaded multiple by value operator.

Template Parameters

<i>nT</i>	type of value to multiply by
<i>T</i>	vector template parameter

Parameters

in	<i>val</i>	value to multiply by
in	<i>rhs</i>	vector to multiply by value

Returns

Vector<T> result vector

Definition at line 279 of file [vector.hh](#).

4.1.3.9 operator*() [2/2]

```
template<Number nT, std::floating_point T>
Vector<T> geom::operator* (
    const Vector< T > & lhs,
    const nT & val )
```

Overloaded multiple by value operator.

Template Parameters

<i>nT</i>	type of value to multiply by
<i>T</i>	vector template parameter

Parameters

in	<i>val</i>	value to multiply by
in	<i>lhs</i>	vector to multiply by value

Returns

Vector<T> result vector

Definition at line 296 of file [vector.hh](#).

4.1.3.10 operator/()

```
template<Number nT, std::floating_point T>
Vector<T> geom::operator/ (
    const Vector< T > & lhs,
    const nT & val )
```

Overloaded divide by value operator.

Template Parameters

<i>nT</i>	type of value to divide by
<i>T</i>	vector template parameter

Parameters

in	<i>val</i>	value to divide by
in	<i>lhs</i>	vector to divide by value

Returns

Vector<T> result vector

Definition at line 313 of file [vector.hh](#).

4.1.3.11 operator&()

```
template<std::floating_point T>
T geom::operator& (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

Dot product operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

T dot production

Definition at line 329 of file [vector.hh](#).

References [geom::Vector< T >::dot\(\)](#).

4.1.3.12 operator%()

```
template<std::floating_point T>
Vector<T> geom::operator% (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

Cross product operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

T cross production

Definition at line 343 of file [vector.hh](#).

References [geom::Vector< T >::cross\(\)](#).

4.1.3.13 operator==() [3/3]

```
template<std::floating_point T>
bool geom::operator== (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

[Vector](#) equality operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

true if vectors are equal
false otherwise

Definition at line 358 of file [vector.hh](#).

References [geom::Vector< T >::isEqual\(\)](#).

4.1.3.14 operator"!="()

```
template<std::floating_point T>
bool geom::operator!= (
    const Vector< T > & lhs,
    const Vector< T > & rhs )
```

[Vector](#) inequality operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

in	<i>lhs</i>	first vector
in	<i>rhs</i>	second vector

Returns

true if vectors are not equal
false otherwise

Definition at line 373 of file [vector.hh](#).

4.1.3.15 operator<<() [4/4]

```
template<std::floating_point T>
std::ostream& geom::operator<< (
    std::ostream & ost,
    const Vector< T > & vec )
```

[Vector](#) print operator.

Template Parameters

<i>T</i>	vector template parameter
----------	---------------------------

Parameters

<i>in, out</i>	<i>ost</i>	output stream
<i>in</i>	<i>vec</i>	vector to print

Returns

`std::ostream&` modified stream instance

Definition at line 387 of file [vector.hh](#).

References [geom::Vector< T >::x](#), [geom::Vector< T >::y](#), and [geom::Vector< T >::z](#).

4.1.4 Variable Documentation

4.1.4.1 Number

```
template<class T >
concept geom::Number = std::is_floating_point_v<T> || std::is_integral_v<T>
```

Useful concept which represents floating point and integral types.

@concept Number

Template Parameters

<i>T</i>	
----------	--

Definition at line 25 of file [vector.hh](#).

Chapter 5

Class Documentation

5.1 geom::Line< T > Class Template Reference

[Line](#) class implementation.

```
#include <line.hh>
```

Public Member Functions

- [Line](#) (const [Vector](#)< T > &[org](#), const [Vector](#)< T > &[dir](#))
Construct a new [Line](#) object.
- const [Vector](#)< T > & [org](#) () const
Getter for origin vector.
- const [Vector](#)< T > & [dir](#) () const
Getter for direction vector.
- bool [belongs](#) (const [Vector](#)< T > &point) const
Checks is point belongs to line.
- bool [isEqual](#) (const [Line](#) &line) const
*Checks is *this equals to another line.*

Static Public Member Functions

- static [Line](#) [getBy2Points](#) (const [Vector](#)< T > &p1, const [Vector](#)< T > &p2)
Get line by 2 points.

5.1.1 Detailed Description

```
template<std::floating_point T>  
class geom::Line< T >
```

[Line](#) class implementation.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Definition at line 21 of file [line.hh](#).

5.1.2 Constructor & Destructor Documentation

5.1.2.1 Line()

```
template<std::floating_point T>
geom::Line< T >::Line (
    const Vector< T > & org,
    const Vector< T > & dir )
```

Construct a new [Line](#) object.

Parameters

in	<i>org</i>	origin vector
in	<i>dir</i>	direction vector

Definition at line 111 of file [line.hh](#).

References [geom::Line< T >::org\(\)](#).

5.1.3 Member Function Documentation

5.1.3.1 org()

```
template<std::floating_point T>
const Vector< T > & geom::Line< T >::org
```

Getter for origin vector.

Returns

const Vector<T>& const reference to origin vector

Definition at line 118 of file [line.hh](#).

Referenced by [geom::Plane< T >::belongs\(\)](#), [geom::Line< T >::Line\(\)](#), and [geom::operator<<\(\)](#).

5.1.3.2 dir()

```
template<std::floating_point T>
const Vector< T > & geom::Line< T >::dir
```

Getter for direction vector.

Returns

const Vector<T>& const reference to direction vector

Definition at line 124 of file [line.hh](#).

Referenced by [geom::Plane< T >::belongs\(\)](#), and [geom::operator<<\(\)](#).

5.1.3.3 belongs()

```
template<std::floating_point T>
bool geom::Line< T >::belongs (
    const Vector< T > & point ) const
```

Checks is point belongs to line.

Parameters

in	<i>point</i>	const reference to point vector
----	--------------	---------------------------------

Returns

true if point belongs to line
false if point doesn't belong to line

Definition at line 130 of file [line.hh](#).

5.1.3.4 isEqual()

```
template<std::floating_point T>
bool geom::Line< T >::isEqual (
    const Line< T > & line ) const
```

Checks is *this equals to another line.

Parameters

in	<i>line</i>	const reference to another line
----	-------------	---------------------------------

Returns

true if lines are equal
false if lines are not equal

Definition at line 136 of file [line.hh](#).

Referenced by [geom::operator==\(\)](#).

5.1.3.5 getBy2Points()

```
template<std::floating_point T>
Line< T > geom::Line< T >::getBy2Points (
    const Vector< T > & p1,
    const Vector< T > & p2 ) [static]
```

Get line by 2 points.

Parameters

in	<i>p1</i>	1st point
in	<i>p2</i>	2nd point

Returns

[Line](#) passing through two points

Definition at line 142 of file [line.hh](#).

The documentation for this class was generated from the following file:

- [include/primitives/line.hh](#)

5.2 geom::Plane< T > Class Template Reference

[Plane](#) class realization.

```
#include <plane.hh>
```

Public Member Functions

- [T dist](#) () const
Getter for distance.
- const [Vector](#)< T > & [norm](#) () const
Getter for normal vector.
- bool [belongs](#) (const [Vector](#)< T > &point) const
Checks if point belongs to plane.
- bool [belongs](#) (const [Line](#)< T > &line) const
Checks if line belongs to plane.
- bool [isEqual](#) (const [Plane](#) &rhs) const
*Checks if *this equals to another plane.*

Static Public Member Functions

- static [Plane getBy3Points](#) (const [Vector](#)< T > &pt1, const [Vector](#)< T > &pt2, const [Vector](#)< T > &pt3)
Get plane by 3 points.
- static [Plane getParametric](#) (const [Vector](#)< T > &org, const [Vector](#)< T > &dir1, const [Vector](#)< T > &dir2)
Get plane from parametric plane equation.
- static [Plane getNormalPoint](#) (const [Vector](#)< T > &norm, const [Vector](#)< T > &point)
Get plane from normal point plane equation.
- static [Plane getNormalDist](#) (const [Vector](#)< T > &norm, T constant)
Get plane from normal const plane equation.

5.2.1 Detailed Description

```
template<std::floating_point T>
class geom::Plane< T >
```

[Plane](#) class realization.

Template Parameters

T	- floating point type of coordinates
-------------------	--------------------------------------

Definition at line 24 of file [plane.hh](#).

5.2.2 Member Function Documentation

5.2.2.1 dist()

```
template<std::floating_point T>
T geom::Plane< T >::dist
```

Getter for distance.

Returns

T value of distance

Definition at line 166 of file [plane.hh](#).

Referenced by [geom::operator<<\(\)](#).

5.2.2.2 norm()

```
template<std::floating_point T>
const Vector< T > & geom::Plane< T >::norm
```

Getter for normal vector.

Returns

const Vector<T>& const reference to normal vector

Definition at line 172 of file [plane.hh](#).

Referenced by [geom::operator<<\(\)](#).

5.2.2.3 belongs() [1/2]

```
template<std::floating_point T>
bool geom::Plane< T >::belongs (
    const Vector< T > & point ) const
```

Checks if point belongs to plane.

Parameters

in	<i>point</i>	const referene to point vector
----	--------------	--------------------------------

Returns

true if point belongs to plane

false if point doesn't belong to plane

Definition at line 178 of file [plane.hh](#).

5.2.2.4 belongs() [2/2]

```
template<std::floating_point T>
bool geom::Plane< T >::belongs (
    const Line< T > & line ) const
```

Checks if line belongs to plane.

Parameters

in	<i>line</i>	const referene to line
----	-------------	------------------------

Returns

true if line belongs to plane
false if line doesn't belong to plane

Definition at line 184 of file [plane.hh](#).

References [geom::Line< T >::dir\(\)](#), and [geom::Line< T >::org\(\)](#).

5.2.2.5 isEqual()

```
template<std::floating_point T>
bool geom::Plane< T >::isEqual (
    const Plane< T > & rhs ) const
```

Checks is *this equals to another plane.

Parameters

in	<i>rhs</i>	const reference to another plane
----	------------	----------------------------------

Returns

true if planes are equal
false if planes are not equal

Definition at line 190 of file [plane.hh](#).

Referenced by [geom::operator==\(\)](#).

5.2.2.6 getBy3Points()

```
template<std::floating_point T>
Plane< T > geom::Plane< T >::getBy3Points (
    const Vector< T > & pt1,
    const Vector< T > & pt2,
    const Vector< T > & pt3 ) [static]
```

Get plane by 3 points.

Parameters

in	<i>pt1</i>	1st point
in	<i>pt2</i>	2nd point
in	<i>pt3</i>	3rd point

Returns

[Plane](#) passing through three points

Definition at line 196 of file [plane.hh](#).

5.2.2.7 getParametric()

```
template<std::floating_point T>
Plane< T > geom::Plane< T >::getParametric (
    const Vector< T > & org,
    const Vector< T > & dir1,
    const Vector< T > & dir2 ) [static]
```

Get plane from parametric plane equation.

Parameters

in	<i>org</i>	origin vector
in	<i>dir1</i>	1st direction vector
in	<i>dir2</i>	2nd direction vector

Returns

[Plane](#)

Definition at line 203 of file [plane.hh](#).

References [geom::Vector< T >::cross\(\)](#).

5.2.2.8 getNormalPoint()

```
template<std::floating_point T>
Plane< T > geom::Plane< T >::getNormalPoint (
    const Vector< T > & norm,
    const Vector< T > & point ) [static]
```

Get plane from normal point plane equation.

Parameters

in	<i>norm</i>	normal vector
in	<i>point</i>	point lying on the plane

Returns

[Plane](#)

Definition at line 211 of file [plane.hh](#).

References [geom::Vector< T >::normalized\(\)](#).

5.2.2.9 getNormalDist()

```
template<std::floating_point T>
Plane< T > geom::Plane< T >::getNormalDist (
    const Vector< T > & norm,
    T constant ) [static]
```

Get plane form normal const plane equation.

Parameters

in	<i>norm</i>	normal vector
in	<i>constant</i>	distance

Returns

[Plane](#)

Definition at line 218 of file [plane.hh](#).

References [geom::Vector< T >::normalized\(\)](#).

5.4 geom::Vector< T > Class Template Reference

[Vector](#) class realization.

```
#include <vector.hh>
```

Public Member Functions

- [Vector](#) (T coordX, T coordY, T coordZ)
Construct a new [Vector](#) object from 3 coordinates.
- [Vector](#) (T coordX={})
Construct a new [Vector](#) object with equals coordinates.
- [Vector](#) & [operator+=](#) (const [Vector](#) &vec)
Overloaded += operator Increments vector coordinates by corresponding coordinates of vec.
- [Vector](#) & [operator-=](#) (const [Vector](#) &vec)
Overloaded -= operator Decrements vector coordinates by corresponding coordinates of vec.
- [Vector](#) [operator-](#) () const
Unary - operator.
- template<Number nType>
[Vector](#) & [operator*=
Overloaded *= by number operator.](#) (nType val)
- template<Number nType>
[Vector](#) & [operator/=](#) (nType val)
Overloaded /= by number operator.
- T [dot](#) (const [Vector](#) &rhs) const
Dot product function.
- [Vector](#) [cross](#) (const [Vector](#) &rhs) const
Cross product function.
- T [length2](#) () const
Calculate squared length of a vector function.
- T [length](#) () const
Calculate length of a vector function.
- [Vector](#) [normalized](#) () const
Get normalized vector function.
- [Vector](#) & [normalize](#) ()
Normalize vector function.
- T & [operator\[\]](#) (size_t i)
Overloaded operator [] (non-const version) To get access to coordinates.
- T [operator\[\]](#) (size_t i) const
Overloaded operator [] (const version) To get access to coordinates.
- bool [isPar](#) (const [Vector](#) &rhs) const
Check if vector is parallel to another.
- bool [isPerp](#) (const [Vector](#) &rhs) const
Check if vector is perpendicular to another.
- bool [isEqual](#) (const [Vector](#) &rhs) const
Check if vector is equal to another.
- template<Number nType>
[Vector](#)< T > & [operator*=
Overloaded *= by number operator.](#) (nType val)
- template<Number nType>
[Vector](#)< T > & [operator/=](#) (nType val)

Static Public Member Functions

- static bool [isNumEq](#) (T lhs, T rhs)
Check equality (with threshold) of two floating point numbers function.
- static void [setThreshold](#) (T thres)
Set new threshold value.
- static void [getThreshold](#) ()
Get current threshold value.
- static void [setDefThreshold](#) ()
Set threshold to default value.

Public Attributes

- `T x {}`
Vector coordinates.
- `T y {}`
- `T z {}`

5.4.1 Detailed Description

```
template<std::floating_point T>
class geom::Vector< T >
```

Vector class realization.

Template Parameters

<i>T</i>	- floating point type of coordinates
----------	--------------------------------------

Definition at line 34 of file [vector.hh](#).

5.4.2 Constructor & Destructor Documentation

5.4.2.1 Vector() [1/2]

```
template<std::floating_point T>
geom::Vector< T >::Vector (
    T coordX,
    T coordY,
    T coordZ ) [inline]
```

Construct a new *Vector* object from 3 coordinates.

Parameters

in	<i>coordX</i>	x coordinate
in	<i>coordY</i>	y coordinate
in	<i>coordZ</i>	z coordinate

Definition at line 55 of file [vector.hh](#).

5.4.2.2 Vector() [2/2]

```
template<std::floating_point T>
geom::Vector< T >::Vector (
    T coordX = {} ) [inline], [explicit]
```

Construct a new [Vector](#) object with equals coordinates.

Parameters

in	<i>coordX</i>	coordinate (default to {})
----	---------------	----------------------------

Definition at line 64 of file [vector.hh](#).

5.4.3 Member Function Documentation

5.4.3.1 operator+=()

```
template<std::floating_point T>
Vector< T > & geom::Vector< T >::operator+= (
    const Vector< T > & vec )
```

Overloaded += operator Increments vector coordinates by corresponding coordinates of vec.

Parameters

in	<i>vec</i>	vector to incremented with
----	------------	----------------------------

Returns

[Vector](#)& reference to current instance

Definition at line 397 of file [vector.hh](#).

References [geom::Vector< T >::x](#), [geom::Vector< T >::y](#), and [geom::Vector< T >::z](#).

5.4.3.2 operator-=()

```
template<std::floating_point T>
Vector< T > & geom::Vector< T >::operator-= (
    const Vector< T > & vec )
```

Overloaded -= operator Decrements vector coordinates by corresponding coordinates of vec.

Parameters

in	<i>vec</i>	vector to decremented with
----	------------	----------------------------

Returns

[Vector](#)& reference to current instance

Definition at line 407 of file [vector.hh](#).

References [geom::Vector< T >::x](#), [geom::Vector< T >::y](#), and [geom::Vector< T >::z](#).

5.4.3.3 operator-()

```
template<std::floating_point T>
Vector< T > geom::Vector< T >::operator-
```

Unary - operator.

Returns

[Vector](#) negated [Vector](#) instance

Definition at line 417 of file [vector.hh](#).

5.4.3.4 operator*=() [1/2]

```
template<std::floating_point T>
template<Number nType>
Vector& geom::Vector< T >::operator*= (
    nType val )
```

Overloaded *= by number operator.

Template Parameters

<i>nType</i>	numeric type of value to multiply by
--------------	--------------------------------------

Parameters

in	<i>val</i>	value to multiply by
----	------------	----------------------

Returns

[Vector](#)& reference to vector instance

5.4.3.5 operator/=() [1/2]

```
template<std::floating_point T>
template<Number nType>
Vector& geom::Vector< T >::operator/= (
    nType val )
```

Overloaded /= by number operator.

Template Parameters

<i>nType</i>	numeric type of value to divide by
--------------	------------------------------------

Parameters

in	<i>val</i>	value to divide by
----	------------	--------------------

Returns

Vector& reference to vector instance

Warning

Does not check if val equals 0

5.4.3.6 dot()

```
template<std::floating_point T>
T geom::Vector< T >::dot (
    const Vector< T > & rhs ) const
```

Dot product function.

Parameters

<i>rhs</i>	vector to dot product with
------------	----------------------------

Returns

T dot product of two vectors

Definition at line 445 of file [vector.hh](#).

References [geom::Vector< T >::x](#), [geom::Vector< T >::y](#), and [geom::Vector< T >::z](#).

Referenced by [geom::operator&\(\)](#).

5.4.3.7 cross()

```
template<std::floating_point T>
Vector< T > geom::Vector< T >::cross (
    const Vector< T > & rhs ) const
```

Cross product function.

Parameters

<i>rhs</i>	vector to cross product with
------------	------------------------------

Returns

Vector cross product of two vectors

Definition at line 451 of file [vector.hh](#).

References [geom::Vector< T >::x](#), [geom::Vector< T >::y](#), and [geom::Vector< T >::z](#).

Referenced by [geom::Plane< T >::getParametric\(\)](#), and [geom::operator%\(\)](#).

5.4.3.8 length2()

```
template<std::floating_point T>
T geom::Vector< T >::length2
```

Calculate squared length of a vector function.

Returns

T length²

Definition at line 457 of file [vector.hh](#).

5.4.3.9 length()

```
template<std::floating_point T>
T geom::Vector< T >::length
```

Calculate length of a vector function.

Returns

T length

Definition at line 463 of file [vector.hh](#).

5.4.3.10 normalized()

```
template<std::floating_point T>
Vector< T > geom::Vector< T >::normalized
```

Get normalized vector function.

Returns

Vector normalized vector

Definition at line 469 of file [vector.hh](#).

References [geom::Vector< T >::normalize\(\)](#).

Referenced by [geom::Plane< T >::getNormalDist\(\)](#), and [geom::Plane< T >::getNormalPoint\(\)](#).

5.4.3.11 normalize()

```
template<std::floating_point T>
Vector< T > & geom::Vector< T >::normalize
```

Normalize vector function.

Returns

Vector& reference to instance

Definition at line 477 of file [vector.hh](#).

Referenced by [geom::Vector< T >::normalized\(\)](#).

5.4.3.12 operator[]() [1/2]

```
template<std::floating_point T>
T & geom::Vector< T >::operator[] (
    size_t i )
```

Overloaded operator [] (non-const version) To get access to coordinates.

Parameters

<i>i</i>	index of coordinate (0 - x, 1 - y, 2 - z)
----------	---

Returns

T& reference to coordinate value

Note

Coordinates calculated by mod 3

Definition at line 486 of file [vector.hh](#).

5.4.3.13 operator[]() [2/2]

```
template<std::floating_point T>
T geom::Vector< T >::operator[] (
    size_t i ) const
```

Overloaded operator [] (const version) To get access to coordinates.

Parameters

<i>i</i>	index of coordinate (0 - x, 1 - y, 2 - z)
----------	---

Returns

T coordinate value

Note

Coordinates calculated by mod 3

Definition at line 502 of file [vector.hh](#).

5.4.3.14 isPar()

```
template<std::floating_point T>
bool geom::Vector< T >::isPar (
    const Vector< T > & rhs ) const
```

Check if vector is parallel to another.

Parameters

<i>in</i>	<i>rhs</i>	vector to check parallelism with
-----------	------------	----------------------------------

Returns

true if vector is parallel
false otherwise

Definition at line 518 of file [vector.hh](#).

5.4.3.15 isPerp()

```
template<std::floating_point T>
bool geom::Vector< T >::isPerp (
    const Vector< T > & rhs ) const
```

Check if vector is perpendicular to another.

Parameters

<i>in</i>	<i>rhs</i>	vector to check perpendicularity with
-----------	------------	---------------------------------------

Returns

true if vector is perpendicular
false otherwise

Definition at line 524 of file [vector.hh](#).

5.4.3.16 isEqual()

```
template<std::floating_point T>
bool geom::Vector< T >::isEqual (
    const Vector< T > & rhs ) const
```

Check if vector is equal to another.

Parameters

<i>in</i>	<i>rhs</i>	vector to check equality with
-----------	------------	-------------------------------

Returns

true if vector is equal
false otherwise

Note

Equality check performs using `isNumEq(T lhs, T rhs)` function

Definition at line 530 of file `vector.hh`.

References `geom::Vector< T >::x`, `geom::Vector< T >::y`, and `geom::Vector< T >::z`.

Referenced by `geom::operator==()`.

5.4.3.17 isNumEq()

```
template<std::floating_point T>
bool geom::Vector< T >::isNumEq (
    T lhs,
    T rhs ) [static]
```

Check equality (with threshold) of two floating point numbers function.

Parameters

in	<i>lhs</i>	first number
in	<i>rhs</i>	second number

Returns

true if numbers equals with threshold ($|lhs - rhs| < \text{threshold}$)

false otherwise

Note

Threshold defined by `threshold_` static member

Definition at line 536 of file `vector.hh`.

5.4.3.18 setThreshold()

```
template<std::floating_point T>
void geom::Vector< T >::setThreshold (
    T thres ) [static]
```

Set new threshold value.

Parameters

in	<i>thres</i>	value to set
----	--------------	--------------

Definition at line 542 of file [vector.hh](#).

5.4.3.19 getThreshold()

```
template<std::floating_point T>
void geom::Vector< T >::getThreshold [static]
```

Get current threshold value.

Definition at line 548 of file [vector.hh](#).

5.4.3.20 setDefThreshold()

```
template<std::floating_point T>
void geom::Vector< T >::setDefThreshold [static]
```

Set threshold to default value.

Note

default value equals float point epsilon

Definition at line 554 of file [vector.hh](#).

5.4.3.21 operator*=() [2/2]

```
template<std::floating_point T>
template<Number nType>
Vector<T>& geom::Vector< T >::operator*= (
    nType val )
```

Definition at line 424 of file [vector.hh](#).

5.4.3.22 operator/=() [2/2]

```
template<std::floating_point T>
template<Number nType>
Vector<T>& geom::Vector< T >::operator/= (
    nType val )
```

Definition at line 435 of file [vector.hh](#).

5.4.4 Member Data Documentation

5.4.4.1 x

```
template<std::floating_point T>
T geom::Vector< T >::x {}
```

[Vector](#) coordinates.

Definition at line 46 of file [vector.hh](#).

Referenced by [geom::Vector< T >::cross\(\)](#), [geom::Vector< T >::dot\(\)](#), [geom::Vector< T >::isEqual\(\)](#), [geom::Vector< T >::operator+](#), [geom::Vector< T >::operator-\(\)](#), and [geom::operator<<\(\)](#).

5.4.4.2 y

```
template<std::floating_point T>
T geom::Vector< T >::y {}
```

Definition at line 46 of file [vector.hh](#).

Referenced by [geom::Vector< T >::cross\(\)](#), [geom::Vector< T >::dot\(\)](#), [geom::Vector< T >::isEqual\(\)](#), [geom::Vector< T >::operator+](#), [geom::Vector< T >::operator-\(\)](#), and [geom::operator<<\(\)](#).

5.4.4.3 z

```
template<std::floating_point T>
T geom::Vector< T >::z {}
```

Definition at line 46 of file [vector.hh](#).

Referenced by [geom::Vector< T >::cross\(\)](#), [geom::Vector< T >::dot\(\)](#), [geom::Vector< T >::isEqual\(\)](#), [geom::Vector< T >::operator+](#), [geom::Vector< T >::operator-\(\)](#), and [geom::operator<<\(\)](#).
